Falcon 1000i range of SCR/IGBT based rectifier UPS systems are designed for the industrial application. Built for working reliably in harsh environmental conditions with IP41 and above with high operating temperatures. Falcon 1000i UPS has earth shielding in the standard input and output transformers to maximize noise attenuation. The commercial units, at best, have only an output transformer as standard and will add a standard double wound transformer to the input without shielding.

- The transformer and power component design calculations for the industrial products assume maximum temperature upto 50°C and N+1 and N+N redundant fan options.
- Latest designs adapt IGBT rectifier, CAN Bus communication and protocol to suit industrial ecosystem
- On demand Natural cool systems can be designed.
